Evans Equations Of Unified Field Theory:

Evans Equations of Unified Field Theory Laurence G. Felker, 2007 Einstein was Right Quantum Mechanics and General Relativity are the two main theories of physics that describe the universe in which we live Attempts at combining them have been made since the 1920 s with no success Albert Einstein spent much of his later years searching for the key to unification He never fully accepted quantum theory and maintained it was incomplete Einstein showed that gravitation is the curving of spacetime not an attractive force between masses Evans has showed that electromagnetism is the spinning of spacetime Using Cartan differential geometry Evans describes Einstein s gravitation and quantum electromagnetics in the same equations This book describes the basics of special relativity quantum mechanics general relativity and the geometry used to describe them

Generally Covariant Unified Field Theory Myron Wyn Evans, 2006-06 This book is the first to describe a very successful objective unified field theory which emerged in 2003 and which is already mainstream physics Einstein Cartan Evans ECE field theory The latter completes the well known work of Einstein and Cartan who from 1925 to 1955 sought to unify field theory in physics with the principles of general relativity These principles are based on the need for objectivity in natural philosophy were first suggested by Francis Bacon in the sixteenth century and developed into general relativity in about 1915 In this year using Riemann geometry Einstein and Hilbert independently arrived at an objective field equation for gravitation Since then there have been many attempts to unify the 1915 gravitational theory with the other three fundamental fields electromagnetism the weak and strong fields As described for the first time in this book unification is achieved straightforwardly with the principles of standard Cartan geometry and the Evans Ansatz The latter shows that electromagnetism is spinning spacetime gravitation is curving spacetime and that they are unified with the structure or master equations of Cartan Quantum mechanics is unified with general relativity using the Evans Lemma and wave equation Technical appendices and charts are provided which show how all the major equations of physics are obtained from the ECE field theory and two introductory chapters describe the background mathematics from an elementary level The mathematical structure of ECE field theory is standard Cartan geometry also known as differential geometry The main topics of contemporary physics are covered in individual chapters which also describe the conditions under which ECE theory reduces to Einstein Hilbert EH theory and to Maxwell Heaviside field theory in classical electrodynamics The Dirac equation is derived as a limit of the wave equation of ECE theory The Schrodinger and Newton equations then follow as limits of the Dirac equation It is therefore shown that ECE field theory provides for the first time a structure for the objective unification of field theory in natural philosophy

Generally Covariant Unified Field Theory Myron W. Evans, This book is the first to describe a very successful objective unified field theory which emerged in 2003 and which is already mainstream physics Einstein Cartan Evans ECE field theory The latter completes the well known work of Einstein and Cartan who from 1925 to 1955 sought to unify field theory in physics with the principles of general relativity These principles are based on the need

for objectivity in natural philosophy were first suggested by Francis Bacon in the sixteenth century and developed into general relativity in about 1915 In this year using Riemann geometry Einstein and Hilbert independently arrived at an objective field equation for gravitation Since then there have been many attempts to unify the 1915 gravitational theory with the other three fundamental fields electromagnetism the weak and strong fields In this fifth volume the Einstein Cartan Evans ECE theory is developed in several new directions notably the replacement of gauge theory with a geometrical principle based on the invariance of the tetrad postulate development of radiative correction theory of basic differential geometry and the development of a theory of electrodynamics which uses space time torsion as a central feature The volume culminates with a precise demonstration using computer algebra of the fact that the Einstein field equation must be regarded as obsolete because of its neglect of torsion Correctly reinstating torsion is a main theme of these volumes a theme which leads to a satisfactory unified field theory a goal of physics for a hundred years

Generally Covariant Unified Field Theory Myron Wyn Evans, 2005 This book is the first to describe a very successful objective unified field theory which emerged in 2003 and which is already mainstream physics Einstein Cartan Evans ECE field theory The latter completes the well known work of Einstein and Cartan who from 1925 to 1955 sought to unify field theory in physics with the principles of general relativity These principles are based on the need for objectivity in natural philosophy were first suggested by Francis Bacon in the sixteenth century and developed into general relativity in about 1915 In this year using Riemann geometry Einstein and Hilbert independently arrived at an objective field equation for gravitation Since then there have been many attempts to unify the 1915 gravitational theory with the other three fundamental fields electromagnetism the weak and strong fields As described for the first time in this book unification is achieved straightforwardly with the principles of standard Cartan geometry and the Evans Ansatz The latter shows that electromagnetism is spinning spacetime gravitation is curving spacetime and that they are unified with the structure or master equations of Cartan Quantum mechanics is unified with general relativity using the Evans Lemma and wave equation Technical appendices and charts are provided which show how all the major equations of physics are obtained from the ECE field theory and two introductory chapters describe the background mathematics from an elementary level The mathematical structure of ECE field theory is standard Cartan geometry also known as differential geometry The main topics of contemporary physics are covered in individual chapters which also describe the conditions under which ECE theory reduces to Einstein Hilbert EH theory and to Maxwell Heaviside field theory in classical electrodynamics The Dirac equation is derived as a limit of the wave equation of ECE theory The Schrodinger and Newton equations then follow as limits of the Dirac equation It is therefore shown that ECE field theory provides for the first time a structure for the objective unification of field theory in natural philosophy
