Event History And Survival Analysis Quantitative Applications In The Social Sciences:

Event History and Survival Analysis Paul D. Allison, 2014-02-19 Social scientists are interested in events and their causes. Although event histories are ideal for studying the causes of events, they typically possess two features: censoring and time-varying explanatory variables that create major problems for standard statistical procedures. Several innovative approaches have been developed to accommodate these two peculiarities of event history data. This volume surveys these methods, concentrating on the approaches that are most useful to the social sciences. In particular, Paul D. Allison focuses on regression methods in which the occurrence of events is dependent on one or more explanatory variables. He gives attention to the statistical models that form the basis of event history analysis and also to practical concerns such as data management, cost, and useful computer software. The Second Edition is part of SAGE's Quantitative Applications in the Social Sciences (QASS) series, which continues to serve countless students, instructors, and researchers in learning the most cutting-edge quantitative techniques.

Event History Analysis Paul David Allison, 1984-11 Drawing on recent event history analytical methods from biostatistics, engineering, and sociology, this clear and comprehensive monograph explains how longitudinal data can be used to study the causes of deaths, crimes, wars, and many other human events. Allison shows why ordinary multiple regression is not suited to analyze event history data and demonstrates how innovative regression-like methods can overcome this problem. He then discusses the particular new methods that social scientists should find useful.

Handbook of Aging and the Social Sciences Kenneth Ferraro, Deborah Carr, 2021-01-09 *Handbook of Aging and the Social Sciences* Ninth Edition provides a comprehensive synthesis of the latest research findings in the science of aging. The complexities of population dynamics, cohort succession, and policy changes modify the world and its inhabitants in ways that must be vigilantly monitored. Completely revised, this edition not only includes the foundational classic themes of aging research but also a rich array of emerging topics and perspectives that advance the field in exciting ways. New topics include families, immigration, social factors, and cognition; caregiving, neighborhoods, and built environments; natural disasters, religion, and health; and sexual behavior, among others. This book will serve as a useful resource and an inspiration to those searching for ways to contribute to the aging enterprise. Includes aging topics at both the micro and macro level. Addresses the intersection of individual and aggregate factors. Covers a spectrum of disciplines including demography, economics, epidemiology, gerontology, political science, psychology, social work, sociology, and statistics. Brings together the work of almost fifty leading scholars to provide a deeper understanding of aging.

Event History Modeling Janet M. Box-Steffensmeier, Bradford S. Jones, 2004-03-29 *Publisher Description* *Higher Education: Handbook of Theory and Research* J.C. Smart, 2012-12-06 *Analyzing Tabular Data* Nigel Gilbert, 2022-02-10 First published in 1993, *Analyzing Tabular Data* is an accessible text introducing a powerful range of analytical methods. Empirical social research almost invariably requires the presentation and analysis of tables, and this book is for those who have little prior knowledge of quantitative analysis or statistics but who have

a practical need to extract the most from their data The book begins with an introduction to the process of data analysis and the basic structure of cross tabulations At the core of the methods described in the text is the loglinear model This and the logistic model are explained and their application to causal modelling to event history analysis and to social mobility research are described in detail Each chapter concludes with sample programs to show how analysis on typical datasets can be carried out using either the popular computer packages SPSS or the statistical programme GLIM The book is packed with examples which apply the methods to social science research Sociologists geographers psychologists economists market researchers and those involved in survey research in the fields of planning evaluation and policy will find the book to be a clear and thorough exposition of methods for the analysis of tabular data
