Not Bored! Anthology 1983-2010 Bill Brown, 2011 Massive anthology of essays and illustrations published in NOT BORED between 1983 and 2010      *Dentro l'algoritmo* Donata Columbro, 2022-12-13 L'algoritmo davvero una mano invisibile che governa le nostre vite E da quando succede Oggi questo termine sinonimo di computer ma anche di intelligenza artificiale in realtà un insieme di regole un procedimento costruito dall'essere umano per ottenere la soluzione a un problema. Puoi decidere al posto nostro modificare la rappresentazione di una categoria di persone radicalizzare rappresentazioni del mondo o incrementare al massimo il tempo che viene trascorso su app e dispositivi In questo libro vogliamo capire cos'è l'algoritmo che sembra influire in modo così preponderante nella nostra quotidianità Perché ce ne stiamo occupando tutti così tanto in questi ultimi anni cosa è cambiato rispetto a quando sono arrivati i primi social network e come possiamo capirne il funzionamento per migliorare il nostro tempo      **What Is Life?** Ed Regis, 2008-04-01 In 1944 the Nobel Prize winning physicist Erwin Schrödinger published a groundbreaking little book called What Is Life In fewer than one hundred pages he argued that life was not a mysterious or inexplicable phenomenon as many people believed but a scientific process like any other ultimately explainable by the laws of physics and chemistry Today more than sixty years later members of a new generation of scientists are attempting to create life from the ground up Science has moved forward in leaps and bounds since Schrödinger's time but our understanding of what does and does not constitute life has only grown more complex An era that has already seen computer chip implanted human brains genetically engineered organisms genetically modified foods cloned mammals and brain dead humans kept alive by machines is one that demands fresh thinking about the concept of life While a segment of our national debate remains stubbornly mired in moral quandaries over abortion euthanasia and other right to life issues the science writer Ed Regis demonstrates how science can and does provide us with a detailed understanding of the nature of life Written in a lively and accessible style and synthesizing a wide range of contemporary research What Is Life is a brief and illuminating contribution to an age old debate      *Life Itself* Francis Crick, 1981 A basic book about biology the origin of life and the origin of man      **Life Evolving** Christian de Duve, 2002-10-17 In just a half century humanity has made an astounding leap in its understanding of life Now one of the giants of biological science Christian de Duve discusses what we've learned in this half century ranging from the tiniest cells to the future of our species and of life itself With wide ranging erudition De Duve takes us on a dazzling tour of the biological world beginning with the invisible workings of the cell the area in which he won his Nobel Prize He describes how the first cells may have arisen and suggests that they may have been like the organisms that exist today near deep sea hydrothermal vents Contrary to many scientists he argues that life was bound to arise and that it probably only took millennia maybe tens of thousands of years to move from rough building blocks to the first organisms possessing the basic properties of life With equal authority De Duve examines topics such as the evolution of humans the origins of consciousness the development of language the birth of science and the origin of emotion

morality altruism and love He concludes with his conjectures on the future of humanity for instance we may evolve perhaps via genetic engineering into a new species and he shares his personal thoughts about God and immortality In *Life Evolving* one of our most eminent scientists sums up what he has learned about the nature of life and our place in the universe An extraordinarily wise and humane volume it will fascinate readers curious about the world around them and about the impact of science on philosophy and religion **The science of life** Herbert G. Wells, Julian Huxley, George P. Wells, 1946

**Science for Life** Brian Clegg, 2015-01-08 In *Science for Life* acclaimed science writer Brian Clegg cuts through the vested interests and confusing contradictory statements that litter the media and the internet to give a clear picture of what science is telling us right now about changing our lives for the better Discover the much advertised antioxidants that aren't good for you the truth about fat and sugar and why one of the healthiest foods contains carcinogens and 21 E numbers Find out what does and what doesn't enhance brainpower from the failure of playing Mozart to babies to the surprising abilities of caffeine and nicotine Understand the tools that advertisers use to persuade us and how to turn the psychological pressure back on them From the shortcomings of the five second rule to the truth about phone masts and nuclear power kept up to date on a partnering website *Science for Life* is your guide to surviving and thriving in the modern world [The Vital Question](#) Nick Lane, 2015-04-23 Why is life the way it is Bacteria evolved into complex life just once in four billion years of life on earth and all complex life shares many strange properties from sex to ageing and death If life evolved on other planets would it be the same or completely different In *The Vital Question* Nick Lane radically reframes evolutionary history putting forward a cogent solution to conundrums that have troubled scientists for decades The answer he argues lies in energy how all life on Earth lives off a voltage with the strength of a bolt of lightning In unravelling these scientific enigmas making sense of life's quirks Lane's explanation provides a solution to life's vital questions why are we as we are and why are we here at all This is ground breaking science in an accessible form in the tradition of Charles Darwin's *The Origin of Species* Richard Dawkins *The Selfish Gene* and Jared Diamond's *Guns Germs and Steel* **Blueprint for a Cell** Christian De Duve, 1991 In narrative form the author winner of the Nobel Prize delineates the blueprint of life the pattern of chemical events on which all life depends and demonstrates unity in the diversity of life on earth *What is Life? the Physical Aspect of the Living Cell & Mind and Matter* Erwin Schrödinger, 1967 **Science of Life Books**, 1971 *Every Life is on Fire* Jeremy England, 2020 Staff and snake Snow and dust River and blood Mountain and sword Flame and tree Wind and breath Voice and word *The Science of Life* Herbert George Wells, 1971 **Life's Edge: The Search for What It Means to Be Alive** Carl Zimmer, 2022-09-13 This book is not just about life but about discovery itself It is about error and hubris but also about wonder and the reach of science And it is bookended with the ultimate question How do we define the thing that defines us Siddhartha Mukherjee author of *The Gene* We all assume we know what life is but the more scientists learn about the living world from protocells to brains from zygotes to pandemic viruses the harder they find it is to locate the edges of life where it

begins and ends What exactly does it mean to be alive Is a virus alive Is a fetus Carl Zimmer investigates one of the biggest questions of all What is life The answer seems obvious until you try to seriously answer it Is the apple sitting on your kitchen counter alive or is only the apple tree it came from deserving of the word If we can't answer that question here on earth how will we know when and if we discover alien life on other worlds The question hangs over some of society's most charged conflicts whether a fertilized egg is a living person for example and when we ought to declare a person legally dead *Life's Edge* is an utterly fascinating investigation by one of the most celebrated science writers of our time Zimmer journeys through the strange experiments that have attempted to recreate life Literally hundreds of definitions of what that should look like now exist but none has yet emerged as an obvious winner Lists of what living things have in common do not add up to a theory of life It's never clear why some items on the list are essential and others not Coronaviruses have altered the course of history and yet many scientists maintain they are not alive Chemists are creating droplets that can swarm sense their environment and multiply Have they made life in the lab Whether he is handling pythons in Alabama or searching for hibernating bats in the Adirondacks Zimmer revels in astounding examples of life at its most bizarre He tries his own hand at evolving life in a test tube with unnerving results Charting the obsession with Dr Frankenstein's monster and how Coleridge came to believe the whole universe was alive Zimmer leads us all the way into the labs and minds of researchers working on engineering life from the ground up

**Life's Devices** Steven Vogel, 2025-05-27 An entertaining and informative book that explores how living things contend with nonbiological reality Life on Earth is subject to the pull of gravity the properties of air and water and the behavior of diffusing molecules yet such physical factors are constraints that drive evolution and offer untold opportunities to creatures of all sizes In this lively introduction to the science of biomechanics Steven Vogel invites you to wonder about the design of the plants and animals around us You will learn why a fish swims more rapidly than a duck can paddle why healthy trees more commonly uproot than break how sharks manage with such flimsy skeletons and why a mouse can easily survive a fall onto any surface from any height With an illuminating foreword by Rob Dunn this Princeton Science Library edition of *Life's Devices* includes examples from every major group of animals and plants along with illustrative problems and suggestions for experiments that require only common household materials

*The Dance of Life* Magdalena Zernicka-Goetz, Roger Highfield, 2021-01-28

**Life from Light** Michael Werner, Thomas Stockli, 2007-06-01 In 1923 Therese Neumann a nun in Southern Germany stopped eating and drinking Apart from the wafer given at Mass she did not eat again despite living for a further 35 years Other similar cases have been reported over the years often holy men from the East and have taken on something of a mythical status However they remain obscure enough to be brushed aside by modern scientists Michael Werner presents a new type of challenge to sceptics A fit family man in his 50s he has a doctorate in Chemistry and is the managing director of a research institute in Switzerland In this remarkable account he describes how he stopped eating in 2001 and has survived perfectly well without food ever since

*Life as Energy* Alexis Mari Pietak, 2011

To many modern scientists a living thing is not significantly different from a lifeless object understood in terms of its basic parts genes and molecules Whereas science has given us many wonderful things it has also taken away something essential our ability to consider life seriously as a unique form of energy Alexis Pietak an exciting new scientific thinker argues that the livingness of a life form is a very real kind of energy that we must recognize along with other kinds of energy such as heat and light In this book Dr Pietak builds an entirely new holistic and rational science of life that could significantly enhance our understanding of individual life forms ecological systems and even human sustainability on our planet This original and groundbreaking book highlights a crucial missing element in mainstream science

**Life Itself** Robert Rosen, 1991 Why are living things alive As a theoretical biologist Robert Rosen saw this as the most fundamental of all questions and yet it had never been answered satisfactorily by science The answers to this question would allow humanity to make an enormous leap forward in our understanding of the principles at work in our world For centuries it was believed that the only scientific approach to the question What is life must proceed from the Cartesian metaphor organism as machine Classical approaches in science which also borrow heavily from Newtonian mechanics are based on a process called reductionism The thinking was that we can better learn about an intricate complicated system like an organism if we take it apart study the components and then reconstruct the system thereby gaining an understanding of the whole However Rosen argues that reductionism does not work in biology and ignores the complexity of organisms Life Itself a landmark work represents the scientific and intellectual journey that led Rosen to question reductionism and develop new scientific approaches to understanding the nature of life Ultimately Rosen proposes an answer to the original question about the causal basis of life in organisms He asserts that renouncing the mechanistic and reductionistic paradigm does not mean abandoning science Instead Rosen offers an alternate paradigm for science that takes into account the relational impacts of organization in natural systems and is based on organized matter rather than on particulate matter alone Central to Rosen's work is the idea of a complex system defined as any system that cannot be fully understood by reducing it to its parts In this sense complexity refers to the causal impact of organization on the system as a whole Since both the atom and the organism can be seen to fit that description Rosen asserts that complex organization is a general feature not just of the biosphere on Earth but of the universe itself

The Secret of Life Georges Lakhovsky, 2021-07-19 In The Secret of Life Cosmic Rays and Radiations of Living Beings Georges Lakhovsky explores the fascinating relationship between cosmic radiation and the vibrations of living cells Drawing upon his extensive research and experiments Lakhovsky presents a groundbreaking theory that suggests every living being emits unique frequencies which play a crucial role in maintaining health and vitality This thought provoking book offers a fresh perspective on the intricate connection between the universe and life itself inviting readers to reconsider their understanding of the fundamental principles that govern our existence
